# Secure Connections

**Providing network security solutions over 10+ years**

**Hassle-Free Installation**

**Secure, Reliable Connectivity**

**Device Monitoring Alerts**

**Knowledgeable 24x7 Support**

*The Network Navigator™ is a miniaturized PC — the size of a battery charger. Simply plug in to a standard wall socket, attach a network cable, and the Network Navigator™ is ready to work for you.*

## Connectivity with Network Navigator™

The Patent Approved Network Navigator™ is a revolutionary, low-cost, high security, reliable Virtual Private Network (VPN) that is plug and play. This groundbreaking SGS technology delivers a secured Internet connection from any place in the world to any user in the world.

The SGS product installs in seconds, navigates its own path home, and shields you from the IP connection issues that plague other solutions in the market today.

Rather than take on the tangle of issues that lurk in disparate networks, you are protected by a VPN Wall that not only shields your environment, but also provides a simple setup that does not require IT expertise.

**Offer Support**— Connect to 1,000 sites without leaving the office, and provide support via a persistent on-line system. Eliminate challenges of firewall management or problem of Internet service interruptions. Save time and resources by connecting remotely, securely, and efficiently. Stop sending staff on expensive support calls that are managed better and cheaper remotely.

**Availability Monitoring**—Monitor all the devices on your network with a ping every 15 minutes, and use at-a-glance dashboards to view your network's health. History graphs provide 6 months of performance for the network and up to 128 devices. Receive alerts when outages occur.

**Performance Monitoring**—Optional monitoring templates with service checks show you a complete picture of the health of your equipment. Receive alerts when performance thresholds are passed, and address issues before they cause outages.

# The details you need...

Networks can be complicated.  To manage them, you need a variety of tools.  The Network Navigator™ starts with a plug and play solution that avoids firewalls and set-up challenges.  A secure connection is created through certification, encryption and L2TP2 connectivity.
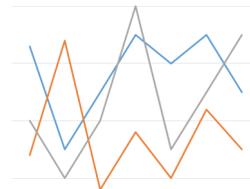

The technology uses hub-and-spoke design to elegantly connect 1,000+ sites with 1,000+ users, granting access based on user privileges.  The ability to script access to select equipment can be managed across sites and Global Network Address Translation (NATs) assures connectivity to the correct site without needing to remember a variety of connectivity information.

The Network Navigator™ provides equipment monitoring by performing simple checks on the health and availability of up to 128 field devices such as video cameras, DVRs, servers, websites, routers, and switches.  Notifications are sent to your team via email or SMS when anomalies are detected and equipment performance is compromised.
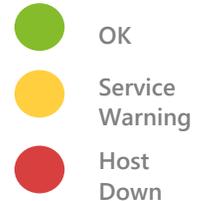

Web Portal access enables easy connectivity to review the information and quickly determine the correct course of action.  Historical reporting also aids in troubleshooting intermittent issues with devices and applications.

# About SGS

Secure Global Solutions has been refining networks since 2006.  All products are backed by a dedicated team of US-based developers and support personnel.  The Network Operations Center (NOC) is staffed with IT professionals 24x7.

Already an established presence in the alarm industry as the creator of stages™ automation software, it is in our DNA to understand networks and real–time management.  SGS now offers the Network Navigator™ - a US patented tool for multi-site connections to hosts or cloud servers.

These core competencies drive our passion for the success of our customers.  For more information about SGS, go to: www.secglobe.net
