Secure Connections

Device Monitoring

Intrusion Detection

Cybersecurity is NOW

Security is relevant in today's ever changing technology world. Secure Global Solutions offers a complete suite of cybersecurity services that can help protect your business from the various threats in cyberspace.

We translate Cyber to the Alarm World.

Our multi-layered approach to cybersecurity services offers you the right solution for your needs.

- **Managed Intrusion Detection** – Information is analyzed continuously and compared to known security attack patterns, giving you the tools and knowledge to mitigate risk.
- **Managed Firewall (backStage)** – a fully managed hardware solution designed to provide a strong perimeter to your company network. Continuous monitoring by SGS provides peace of mind around the clock.
- **Vulnerability Assessment** – SGS acts as an outside threat, conducting penetration exercises and application analysis. An executive summary provides you clear recommendations and a way forward for your business.
- **Network Analysis** – SGS' 30 Day Analysis will provide you with a comprehensive look at your network, device, and application performance.
- **ipDirector**– Improve IP communications reliability with Multiple Endpoint delivery and real-time switching.
- **Secure Connections** – is a patented, secure Virtual Private Network (VPN) solution that ensures reliable encrypted communications at a low cost.

Providing central station solutions and expertise for over 10 years

stages Powered

The complete suite of cybersecurity solutions offered by SGS are powered by the award-winning stages automation platform. With stages integration, provide complete notifications and communications into your central station operations.

Assurance. Vigilance. Simplified.

All of SGS security services are backed by a Network Operations Center (NOC) with comprehensive expertise in cybersecurity. SGS has a 24/7 operation with a dedicated team committed to providing you with immediate assistance. Our recommendations will serve as a quick response to any event that may occur within your network.

Why SGS?

SGS understands the unique challenges facing central stations. SGS brings over 30 years of alarm monitoring expertise to the table and provides unparalleled knowledge to optimize your business. SGS has adopted the NIST framework as the foundation for a sound security strategy, and has built its managed services around these building blocks.

From intrusion detection and vulnerability assessments to device monitoring and firewalls, SGS has the expertise and knowledge to help you build a successful in-house cybersecurity solution.

Company at A Glance

SGS is now being used to manage over **4 million** accounts in the alarm monitoring industry (Oct 2017). It is also being used in 7 World Class Central Stations spanning across 3 continents (North America, Europe, and Asia).

SGS has also aligned and integrated with many Best-In-Class Partners within the alarm monitoring space (Alarm.com, iControl/Comcast, AXIS)
